Show me the data!

Week11: Geographic Information System

Instructors: Chung-pei Pien

ZU1942001/266868001/Z23937001/ZM1941001

Geographic Information System

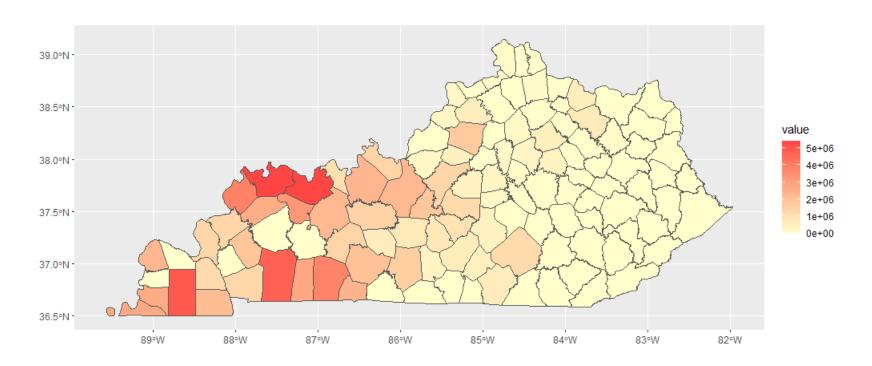

"A geographic information system (GIS) is a computer system for capturing, storing, checking, and displaying data related to positions on Earth's surface (National Geographic n. d.)."

Kentucky Soybean Production

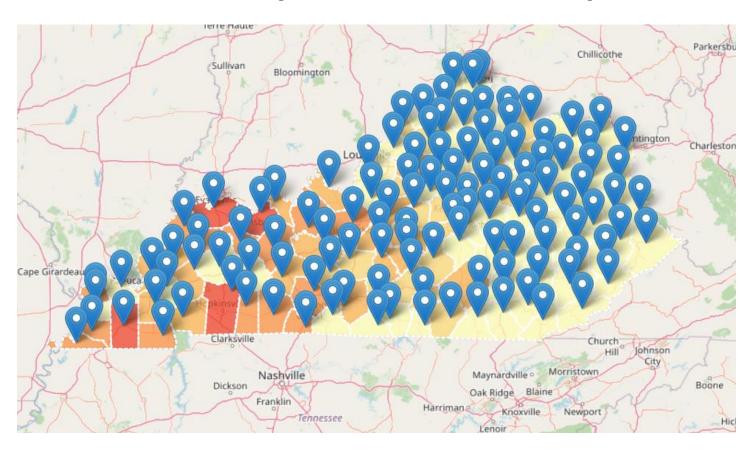

We will use the data of US soybean production by county to show how to produce GIS plots.

Kentucky Soybean Production

Download soybean.html and open it

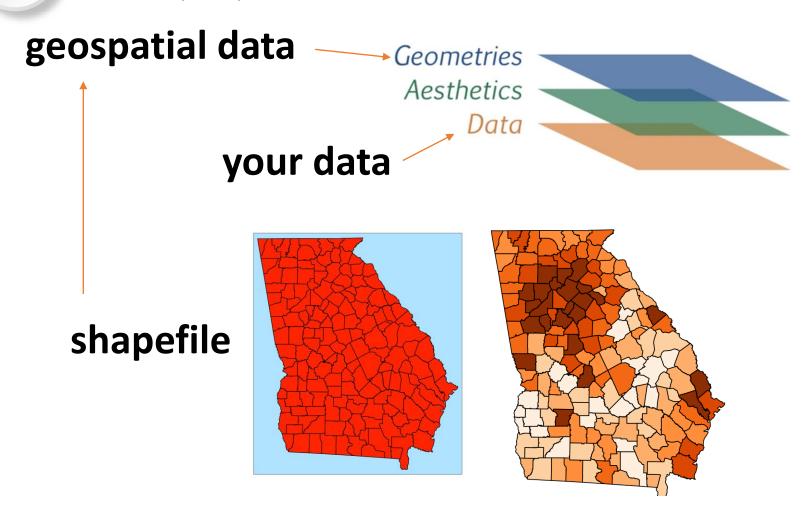

Powerful leaflet package

01

Introduction of GIS

Kentucky Soybean Production

Therefore, we need to find the same level of GIS file: county level

Geospatial Data

You can't produce geospatial data by yourself. However, many websites provide geospatial data.

In the US, you can try US Census Bureau website.

01 Introduction of GIS Geospatial Data

KML- Cartographic Boundary Files

2017 Entity Name Description [<1.0 MB]</p>

Nation-based Files

American Indian/Alaska Native Areas/Hawaiian Home Lands

b_2017_us_aiannh_500k.zip [1.0 MB]

Congressional Districts: 115th Congress

- cb_2017_us_cd115_500k.zip [5.1 MB]
- cb_2017_us_cd115_5m.zip [1.2 MB]
- b_2017_us_cd115_20m.zip [287 KB]

01 Introduction of GIS Geospatial Data

In Taiwan, you can download diverse levels geospatial data through SEGIS website

https://segis.moi.gov.tw/

Geospatial Data

When you click a data you want to download, SEGIS shows a window with SHP icon.

You can click it and download a zip file.

Leaflet package is a powerful tool to create an interactive GIS map.

Leaflet also uses shapefile to create maps.

Go to Leaflet for R website to get more information:

https://rstudio.github.io/leaflet/
